

# Accesso™ Kit

## Elements in the kit

- Accesso™ reader
- PicoPass™ chips
- CD Rom with application software

## Application Software

- Active X component (Visual Basic, Visual C++, Delphi)
- Sampling code for each of the above language
- C library
- Software tool for an easy integration (MX3)
- USB drivers

## Documentation

- Getting started
- PicoPass™ chip datasheet
- Accesso™ datasheet
- ActiveX datasheet
- Packaging Offer flyer

INSIDE Contactless is addressing the developer's community with an entire line of development packages. We have done our best to meet most of the developer's community needs.

## Kit Purpose

The Accesso™ kit allows developers to evaluate INSIDE's contactless technology and enables easy applications development for Windows® 98, Millenium, 2000 and XP. Developers will be able to get acquainted with the products compliant with different standards (ISO 14443 A, B, 15693 and FeliCa™).

## Audience

The kit has been designed to suit all of the PC developers' community ranging from beginners to experts, who will benefit from this user friendly evaluation software and API permitting the development of application with the most common tools.

## Typical Applications

Many applications can be developed with the Accesso Kit such as PC logon, internet/intranet access, e-commerce, point of sale, identity confirmation; whenever a PC needs to communicate with a contactless transponder.

### Other kits available

Name	Type	Distance
Hand'IT™	Handheld	4 cm
Accesso™	Desktop	4 cm
Proximity	Short range	15 cm
Long range/gate	Long range	75cm/150cm
Personalization	Chip personalization
